

# POLYMER | G

Looking for an ultra-fast Epoxy Compound that could be cured in seconds?

Needs your epoxy coating to stand in severe outdoor environments and to obtain excellent mechanical properties?

**Our newly developed EPV 9411 UV cured epoxy is your solution!**

- > A low viscosity, clear, 100% reactive liquid that can be cured instantly by exposure to UV lamp at 395nm wavelengths.
- > A system that can demonstrate superior uniform deep curing capabilities of up to one inch. After curing - exhibiting excellent mechanical properties with high stability in an outdoor environment and high temperature.
- > The EPV 9411 can be matched for applications such as potting, coating plastics & metal surfaces as protection against harsh climatic environments, reinforcement of carbon fiber & glass fiber in filament winding applications.
